

The Centre for Active Transportation (TCAT) at Clean Air Partnership advances safe and active streets for all.

We do this by working with municipalities, public health units, research institutes, universities, and other clients to support:

Informed decision-making

Knowledge is the foundation of informed decision making.

TCAT is at the forefront of knowledge generation in active transportation, with a highly-regarded track record of conducting leading-edge research and policy analysis.

Our services to support informed decision making include:

- + Expert review
- + Best practice scans and case studies
- + Knowledge translation
- + Impact evaluation
- + Opportunity, feasibility and needs analysis

Engaged communities

People are at the heart of our work.

We thoughtfully engage communities in the planning, implementation, and programming of their streets. We know how to inspire, engage, and excite communities.

Our services to engage communities include:

- + Convening partners
- + Community-led assessments of the public realm
- + Facilitating co-design and citizen engagement
- + Incubating cycling

Prepared professionals

Professional practice is where the (bike) rubber hits the road.

Our professional development services ensure that transportation, built environment, and public health professionals are equipped to create active, safe, and inclusive streets.

Our knowledge exchange topics include:

- + Complete Streets in Canada
- + Moving from policy to implementation
- + Connecting built environment, transportation and health
- + Advancing cycling in the suburbs
- + Equity and active transportation
- + Custom workshops
